FEDERAL ENERGY
REGULATORY COMMISSION

Mary Lou Rosczyk
24435 Village Walk Pl Apt 304
Murrieta, CA, 92562-5295

Dear Secretary,

There was a time when a 14% profit might have been reasonable, however, that time is long past. When bank CD's pay at most 2.5% and even the historic average for the stock market is 7%, a 14% return under any conditions for natural gas pipeline projects is atrocious. The Federal Energy Regulatory Commission needs to re-think this overly generous profit incentive.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Mary Lou Rosczyk

Federal Energy Regulatory Commission
Secretary of the Commission Kimberly D. Bose

Arlington, VA, 22204-5117

Dear Secretary,

If anyone truly cared about "draining the swamp", hand outs to these fossil fuel companies would stop. I believe subsidies should be provided to clean and renewable energy companies to help us go down a path to a cleaner future and help avoid the worst potential outcomes of the climate change crisis, as well as to stimulate new companies that could ultimately help the U.S. economy grow. Additionally, if the idea is to support free markets for the energy sector, than no subsidies should be handed out, to include those to dirty energy companies. It's a hypocritical policy that only helps the already well off and hurts the rest of us.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Dear Secretary,

I worry about the future of my children, grandchildren, and all future generations when time and money are overspent on archaic and destructive sources of energy instead of renewable and safer sources such as wind and solar.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Sue Safford
