REGULATORY COMMISSION

Clifford Manwiller  
1644 60th St  
Turtle Lake, WI, 54889-9131

Dear Secretary,

We should not protect industry from market forces. Subsidies should for carbon fuels delays the needed shift to alternative fuels.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Clifford Manwiller

FEDERAL ENERGY  
REGULATORY COMMISSION

David Mann  
1889 Maple Ave Unit E7  
Evanston, IL, 60201-3169

Dear Secretary,

We have no reason to incentivize the destruction of our land, air, and water. But that is what guaranteed profits do -- they distort the energy market while causing destructive overbuilding. We have 10-12 years to make lasting changes to our energy usage profile if we want to avoid the worst impacts of climate change. Why would we guarantee profits for gas pipelines in these circumstances? Are we hell-bent on self destruction? Any type or amount of subsidy to carbon gas intensive energy systems is too much if we want our nation to survive. Climate change WILL force us to change how we live -- our choice is how sudden and violent that change has to be. Burying our heads in the sand now will only make the later reckoning worse.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Dear Secretary,

I am outraged that my tax money is supporting corporate pollution!

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Marie Mitchell

Dear Secretary,

Massive organizations that desecrate and pollute our environment are rarely brought to task, and if they are, they manage to wheedle settlements to a fraction of what was set, while small concerns such as organic farming are fought at every turn to impede their progress and cut into their operating margin. Who gets the agricultural subsidies? The unspeakable CAFO dairies and hog plants, those that pollute our waterways and still use routine antibiotics. The small farmers have to verify every move they make to keep their organic certification, whereas the agribusiness farms that keep our air, waterways (and bodies) polluted with pesticides and herbicides get all the subsidies.

Dear Secretary,

Billionaires, that intentionally profit from wrecking the environment. They are the radioactive scrooge we must rebuke and soundly put down! There is NO amount of money worth wrecking our priceless home! If you are profiting from the destruction of earth. You are headed for prison- LIFE SENTENCE

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Nick Moidja

Dear Secretary,

FERC's guaranteed rate of return is distorting the marketplace. Wall St. has been warning oil and gas companies for more than a year now that they're over building infrastructure that will have to be idled soon. If they weren't guaranteed any profits at all on pipelines they'd be doing less of this and it would be better for them, better for investors and better for the environment. It's a triple win - don't approve any ROE at all for pipeline expansion.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Beth Merrill

Dear Secretary,

It may take more time and resources to individually analyze these projects but it would make it more realistic in the returns we have to pay - which could save the taxpayers money.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Dear Secretary,

Oil pipelines leak. That is not an opinion, It's reality. And the fact that we are giving a 14% guaranteed income (from our tax dollars) to these people will only create more oil leaks that will destroy our air, land, and water. When XL was talking to Nebraska about their pipeline going through their state, that same pipe line was leaking in South Dakota. Now, they are using a dirty type of oil, tarsand oil and they must put a chemical in to make flow through the pipeline. If it leaks in a dangerous spot, like an aquifer, it could destroy water for millions of us. Using out of date data is unreliable and up-to-date data should be used since we might be giving more money to these companies than they deserve . I don't believe we should be paying a 14% guaranteed income for fossil fuel companies when we should be investing in renewable energy. Fossil fuels are destroying our planet with the carbon dioxide and methane it produces.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. What good is all that money if the world you have to spend it in is ruined?

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such “affiliate agreements”, FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren’t even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Dustin Fee
