REGULATORY COMMISSION

Kenneth Marsh  
8022 Bleriot Ave  
Los Angeles, CA, 90045-3006

Dear Secretary,

Stop all subsidies for the rich!

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Kenneth Marsh

Megan Rast  
1164 S Acoma St  
Denver, CO, 80210-1592

Dear Secretary,

These practices harden the infrastructure and make it hard to adapt to changing market conditions. By allowing a guaranteed return to private companies for projects that run over public lands, we are not accounting for or having provisions such that they pay for pollution that occurs. This would never happen in a private contract, why is it happening in our government?

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Dear Secretary,

Gas and oil are dying industries and the last ditch efforts being made to stretch out their inevitable demise are irreparably harming our planet and our children's futures. I have two kids, ages 2 and 7, and recent scientific predictions on our global chances of survival have me terrified for their lives. Guaranteeing a profit on pipelines is not only encouraging the construction of unnecessary pipelines that are harming eco systems and contributing to global climate change, but it is also discouraging industry expansion into safer and healthier forms of power production that could benefit not only our continued existence on this planet but could provide healthier jobs and more security for so many families.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Dear Secretary,

We cannot continue utilizing fossil fuels at this pace. Please take a stand against fracking and subsidizing pipelines!

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Lisa Massengill

How about subsidizing renewable energy with these funds instead of handouts to polluters. I don't want my tax dollars going toward any pipeline. I would be happy to contribute to solar or wind instead.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Kim Maul

Dear Secretary,

THE TRUMP GOP IS MAKING ME ASHAMED TO BE A REPUBLICAN! LOOK AT THE BIG PICTURE FOR THE GOOD OF THE PLANET. OUR FAILURE TO ELIMINATE DEPENDENCE ON COAL AND OIL AND NUCLEAR POWER IS A MAJOR INTERNATIONAL SECURITY PROBLEM. IT IS IMPORTANT TO THE PLANET AND TO INTERNATIONAL SECURITY TO MAKE ENERGY EFFICIENCY AND SUSTAINABILITY A PRIORITY. WE MUST STOP DESTROYING OUR ENVIRONMENT AND CONVERT TO SUSTAINABLE ENERGY. SUSTAINABLE ENERGY IS THE ANSWER. NO COAL. NO OIL. NO NUCLEAR. THERE IS NO SUCH THING AS CLEAN COAL OR CLEAN OIL OR CLEAN, SAFE NUCLEAR POWER. WE HAVE TO BREATHE THIS AIR AND DRINK THIS WATER; WE DON'T WANT IT POLLUTED! WE SHOULD BE LEADING THE WORLD IN THIS EFFORT, NOT DRAGGING OUR FEET! WE NEED TO STOP ALL FAVORS, SUBSIDIES AND TAX BREAKS FOR NUCLEAR, COAL, AND OIL COMPANIES! END SEISMIC BLASTING, FRACKING, AND OIL PIPELINES!

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. Dear Secretary,

How is this not welfare to oil and gas companies? Surely their profits, taken normally, at the expense of our health, is sufficient. They do not need welfare on top of this, which will be added, of course, to our expenses.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need.
