Raleigh, NC, 27608-1669

Dear Secretary,

It's not always about money - money can't replace what nature has given us. Actually making money off of what we've been given from God, destroys nature. Please STOP being so greedy!

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Ann Fawcett

Dear Secretary,

With the thousands of people endangered by oil and gas pipelines and the high probability of environmental damage throughout its course, I'm confused as to why companies should make any profit at all when they build them. Instead, it would be fair to charge them an enormous amount of money to build a pipe and then keep that fund in an account to pay for future damages caused by what they build.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. Dear Secretary,

This is disgusting and should be ceased forthwith , we don't need more oil , wholesale prices for fossil electricity are now \$40 and for green renewables \$ 20 QED

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Tony Marmont
