ORIGINAL

FEDERAL ENERGY
REGULATORY COMMISSION

Dear Secretary,

Why do we continue with corporate welfare? As taxpayers we are getting the short end of the stick at both ends!

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Anthony Merola

FEDERAL ENERGY
REGULATORY COMMISSION

Peggy Malnati
35935 W 14 Mile Rd
Farmington Hills, MI, 48331-1303

Dear Secretary,

We need to use a different calculus when figuring the ROI of natural gasline projects. It's imperative that we consider the cost and true impact of continuing to burn fossil fuels with abandon in a warming world with ever more damaging and unpredictable weather patterns.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Peggy Malnati

Santa Fe, NM, 87508-1451

Dear Secretary,

It is beyond obscene that these huge and profitable corporations are receiving any subsidies at all from the Federal Government, especially after the huge tax breaks they received. We must no reward those who continue to create harm to communities in water and air quality and who continue the march to destroy the planet and environment. I would remind anyone who has studied the Bible of the verse "The love of money is the root of all evil" and it is true. For some of the wealthiest people in this country who have everything anyone could ever dream of, it is still not enough. It is sad that success has come to be defined only by wealth accumulated, however ill gotten it may be.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Genie And Bob Mccombs

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Linda Nelson

Dear Secretary,

Isn't guarantees a profit on something like building a pipeline something like welfare? It's not good for free market competition and in this case it's not good for the environment or human health either.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. As a fossil fuel, natural gas is contributing to the growing crisis of global warming. The only energy industries which should receive guarantees and support from the Federal government are those which do not contribute to global warming, such as wind and solar.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Dear Secretary,

I am alarmed that with a degrading environment affecting all of us, there is still insistence on increasing the building of gas pipelines for fossil fuel delivery in a time when it's clear that it is killing us to continue with this strategy. All of this for jobs and in the name of profit. Find a different way! It's imperative for humans to survive on this planet with sustainable practices being in the forefront!!!

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. Dear Secretary,

We do not need to insure private business against losses!! The risk of loss IS the whole point of PRIVATE business and the rates off return they can carve out of the market. Government contracts and orders are businesses' dream -- I know... I've been on the business end. This 'giveaway' is ridiculous and needs to be stopped ASAP. If a project is legitimately "iffy" for the contractor, a mechanism should be in place to renegotiate under specific circumstances. This is a no-brainer!!

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need.
