Re: Docket No. PL19-4-000

6/13/2019

Robert Schneck
200 Rector Pl Apt 4X
New York, NY, 10280-1158

Dear Secretary,

It is absurd in a capitalist economy to guarantee anyone's profit

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Robert Schneck

Dear Secretary,

I don't think automatic profit guarantees for oil and gas pipelines are a good idea. There should be some measure of conditionality on any guarantee, such as compliance with environment restrictions, necessity for the pipeline, and minimizing pollution and other side effects. Natural gas, if it can be harvested cleanly, maybe has an edge over oil, in that it burns more cleanly, but this can't come at the cost of pollution in constructing the pipeline and failure to guard against leaks and other damage! The days of the free pass should end!

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Dear Secretary,

While natural gas is a cleaner resource than the dirty tar sands oil being pushed out of Canada it is still a fossil fuel and as such contributes to global warming just like every other fossil fuel. We are already seeing increasingly intense hurricanes and typhoons, endless wildfires seasons, tornadoes almost year round and increasingly destructive flooding linked directly our past actions and use of fossil fuels like there's no tomorrow but tomorrow is here, now. The emphasis must be redirected towards renewable energy sources and efficiency and conservation of all energy resources, not guaranteed income for companies that have known for decades that the use of their products would cause environmental disaster.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Lesley Westbrook

Dear Secretary,

It's time to stop giving handouts to polluters. The current guaranteed return on investment is driving polluting corporations to double down on fossil fuel development. They should be transitioning to renewable energy sources, like solar or wind. These are available and affordable now -- even with the playing field tipped in fossil fuels' favor.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Dear Secretary,

I am sure that there are lots of deserving businesses out there that would love to be guaranteed a 14% profit. This is 2019, it is becoming quite obvious that climate change is already a problem, here and around the world. Why should we invest more in an infrastructure that contributes more green house gases instead of investing in alternative energy sources???

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

ENERGY
REGULATORY COMMISSION

Jim Schulman
Unknown
Washington, DC, 20002

Dear Secretary,

Guaranteed rates of return are ultimately economically and ecologically unsustainable. Investments in infrastructure approved by FERC - especially where threats of eminent domain are authorized - should be directly related to potential benefits for American citizens. If a pipeline is to be built for the export of fuels, and the benefits will only accrue to energy companies and investors, no guarantees should be accorded whatsoever.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Industry leaders would take a guaranteed 14% ROI and continue ...building infrastructure, even if it was not needed. A good short-term financial decision, but not best for our climate OR our grandchildren

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Roger Yackel

Dear Secretary,

Carbon polluters are helping to destroy our planet and our way of life and should not be rewarded with tax payer money. We need clean green energy and no hand outs to carbon polluters. American tax payers are paying for this while climate change goes unaddressed and the science ignored. This is not fiscally responsible and it certainly is not moral. Future generations are being put at risk. My grandson is already asking-what is being done to prevent my future being a natural disaster? Why are costs being passed onto generations that did not create the carbon pollution disaster?

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. Dear Secretary,

As electric utilities reduce their amount of natural gas-fired power in favor of renewables and storage, and jurisdictions encourage the use of electric rather than gas appliances, demand will continue to decrease. Some cities and state regulators are considering actions to incentivize or require new buildings to be electric-only and to retrofit existing buildings. Expansion of gas transmission infrastructure now would be foolhardy.

FEDERAL ENERGY
COMMISSION

Marek Zalewski
2421 Carey Ln
Vienna, VA, 22181-5445

Dear Secretary,

This is ridiculously twisted. Let's get rid of it!

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Marek Zalewski
