FEDERAL ENERGY
REGULATORY COMMISSION

Malgorzata Schmidt
244 Dill Ave
Frederick, MD, 21701-4906

ORIGINAL

Dear Secretary,

No fossil fuels! No murder/suicide!

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Malgorzata Schmidt

Federal Energy Regulatory Commission

Dear Secretary,

It is obscene how much money is going to filthy fossil fuel CEO's and how much damage and destruction is being done to our lands! It is wrong on so many levels! Let's look to the future of clean, renewable resources instead of the ugly, filthy fossil fuels. Leave them in the ground!! No more money should be invested in fossil fuels that destroy our environment.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Masaru Oka
301 S Yellowstone Dr Apt 115
Madison, WI, 53705-4354

Dear Secretary,

It's absurd that companies are guaranteed profits to build energy infrastructure like pipelines. Here in Wisconsin, we're dealing with a proposal for a new high-voltage transmission line that studies show is simply not needed based on predicted future demand. What it means for me is that my electricity rates will go up to pay for that profit, not for any improvement in service. It's no different for pipelines, consumers are going to pay more for capacity that's not needed. Make these companies compete for our money, don't force us to pay them more.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Dear Secretary,

I know many people who's town was ruined by natural gas lines going even down main street in one instance. Let's incentivize companies that do NOT ruin our land, water aquifers and encourage wind and solar energy sources! This is the future... build it for our children's sustainable energy future!

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Cynthia Pannucci

Dear Secretary,

This catering to the oil industry must end. They have received more than enough support from the government! It is time to face the future and stop catering to the past!

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. . FERC should also give due consideration to cleaner, safer, and more affordable alternatives to fracked gas pipelines and power plants, such as renewables and demand-side energy efficiency.

Sincerely,

Ed Moya

Dear Secretary,

More and more pipelines are endangering our fresh water sources. We need fresh water to survive. Also pipelines are part of the broader fracking issue. Fracking uses our water and pollutes it. Disposing of frack waste water is another environmental hazard. It is time to move to renewable energy, not encourage more drilling for gas and oil. Stop subsidizing this development.

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. Dear Secretary,

Time is up!! We have the technology to release our planet from the tyranny of exploiting fossil fuels for no reason other than to destroy the planet and line the pockets of the fossil fuel industry! Do the right thing and invest in alternative energy NOW!

FERC must stop its business as usual approach to allowing self-dealing by fracked gas companies and their affiliates as a means of measuring public need. This self-dealing consists of a company effectively contracting to buy the gas from itself and claiming the contract as proof of public need. By accepting such "affiliate agreements", FERC is spurring the gross overbuilding of gas pipelines, driving up the rate of fracking and exacerbating the threat to public health and safety along the entire supply chain: from the wells that poison our air and drinking water to our rivers, streams, and shorelines eroding from runoff and accelerating climate change-induced sea level rise.

Meanwhile, customers are paying higher utility bills while utilities and other corporate polluters reap profits from guaranteed rates of return for pipelines that aren't even needed. FERC should determine need based on independent, regionally-focused assessments to avoid undue pipeline redundancy and the resulting greenhouse gas pollution that in some instances directly contravenes regional environmental goals. .
